

Attendance, attainment and engagement

Does class attendance influence attainment?

Which factors influence class attendance?

Week 1

A photograph of a lecture hall with several students sitting at desks. The text "Week 10" is overlaid in the bottom left corner. The hall has a grid ceiling with rectangular light fixtures. The students are scattered across the rows, some looking towards the camera and others looking down or away. The desks are light-colored wood with dark metal supports.

Week 10

Revision class

The Proposition

the more lectures/tutorials students attend, the better their “engagement”, and the better their marks

Attendance data

Collected two ways:

registers (13-14)

clickers (14-15)

Modules

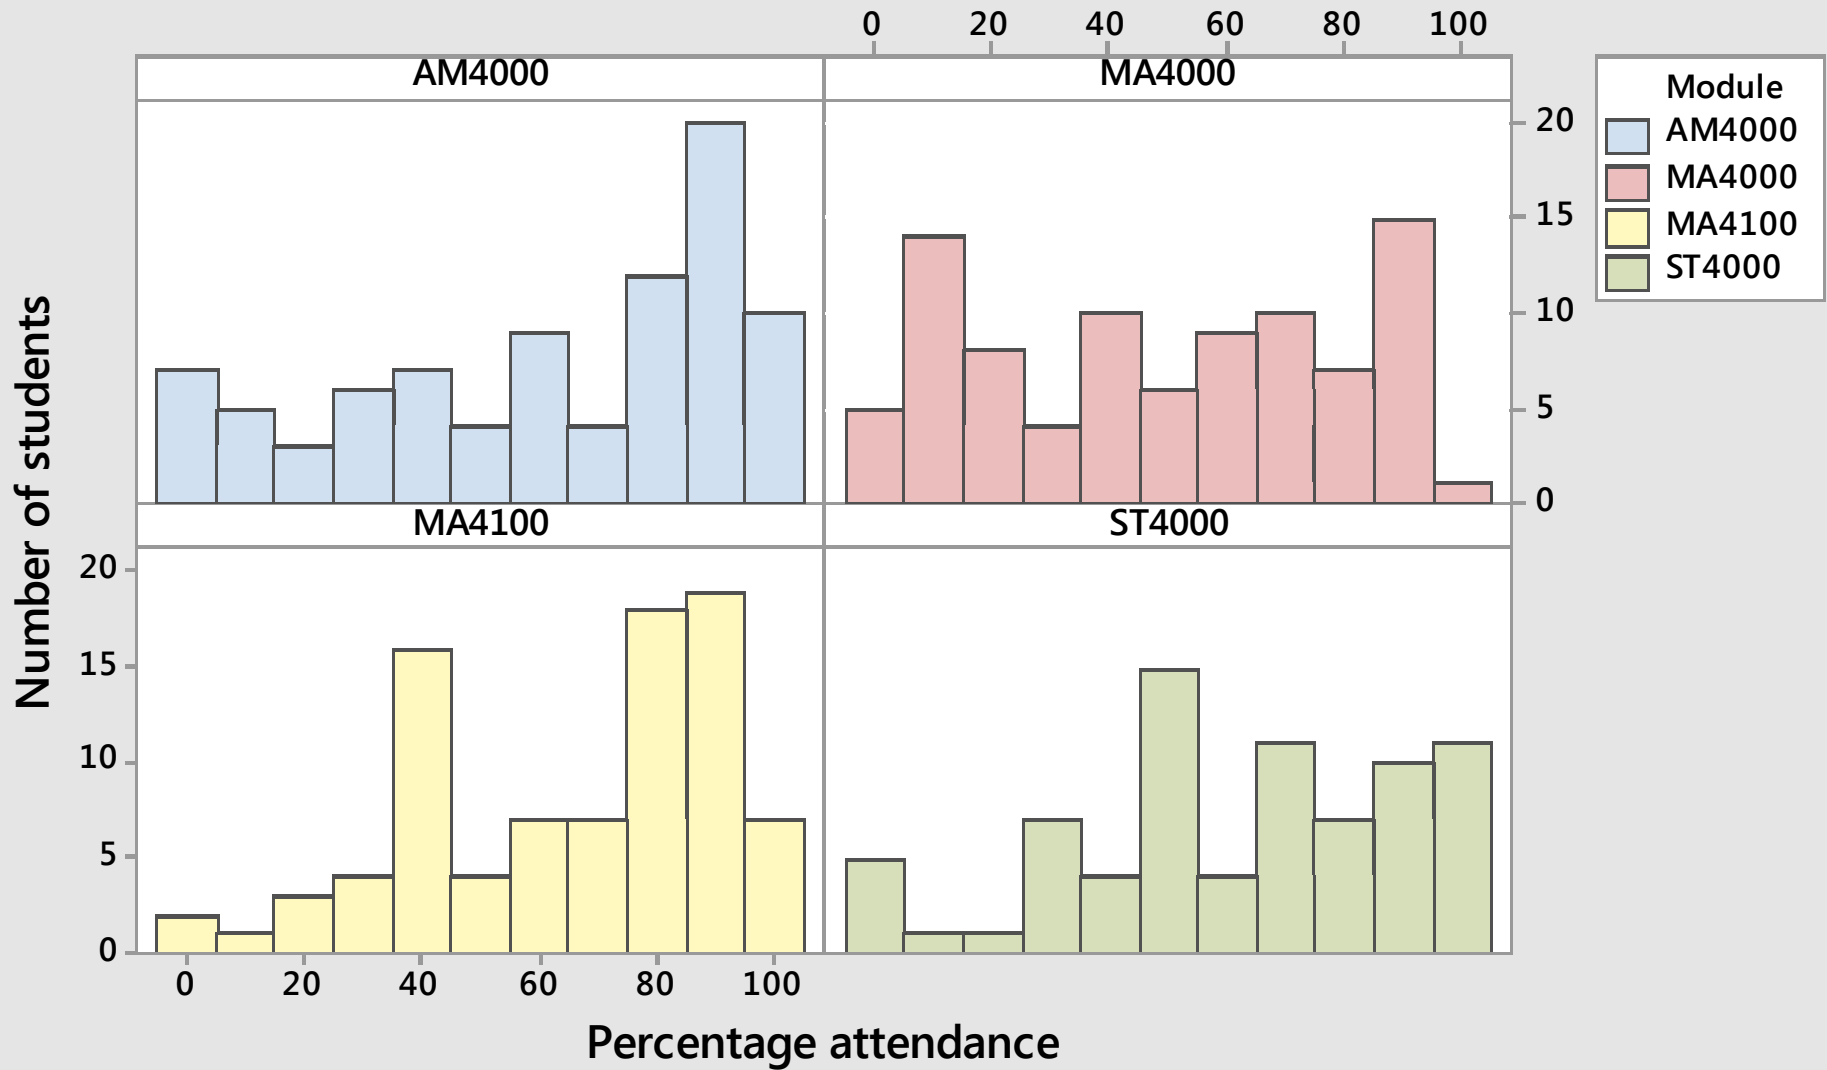

Intro to probability & stats (ST4000)	}	2013-14, 2014-15
Applications of maths to finance (AM4000)		
Intro to comp maths (MA4100)	}	2014-15 only
Intro to maths methods (MA4000)		

Contingencies (MA6000) 2013-14

Psycholinguistics 2013-14

First year maths modules 14-15

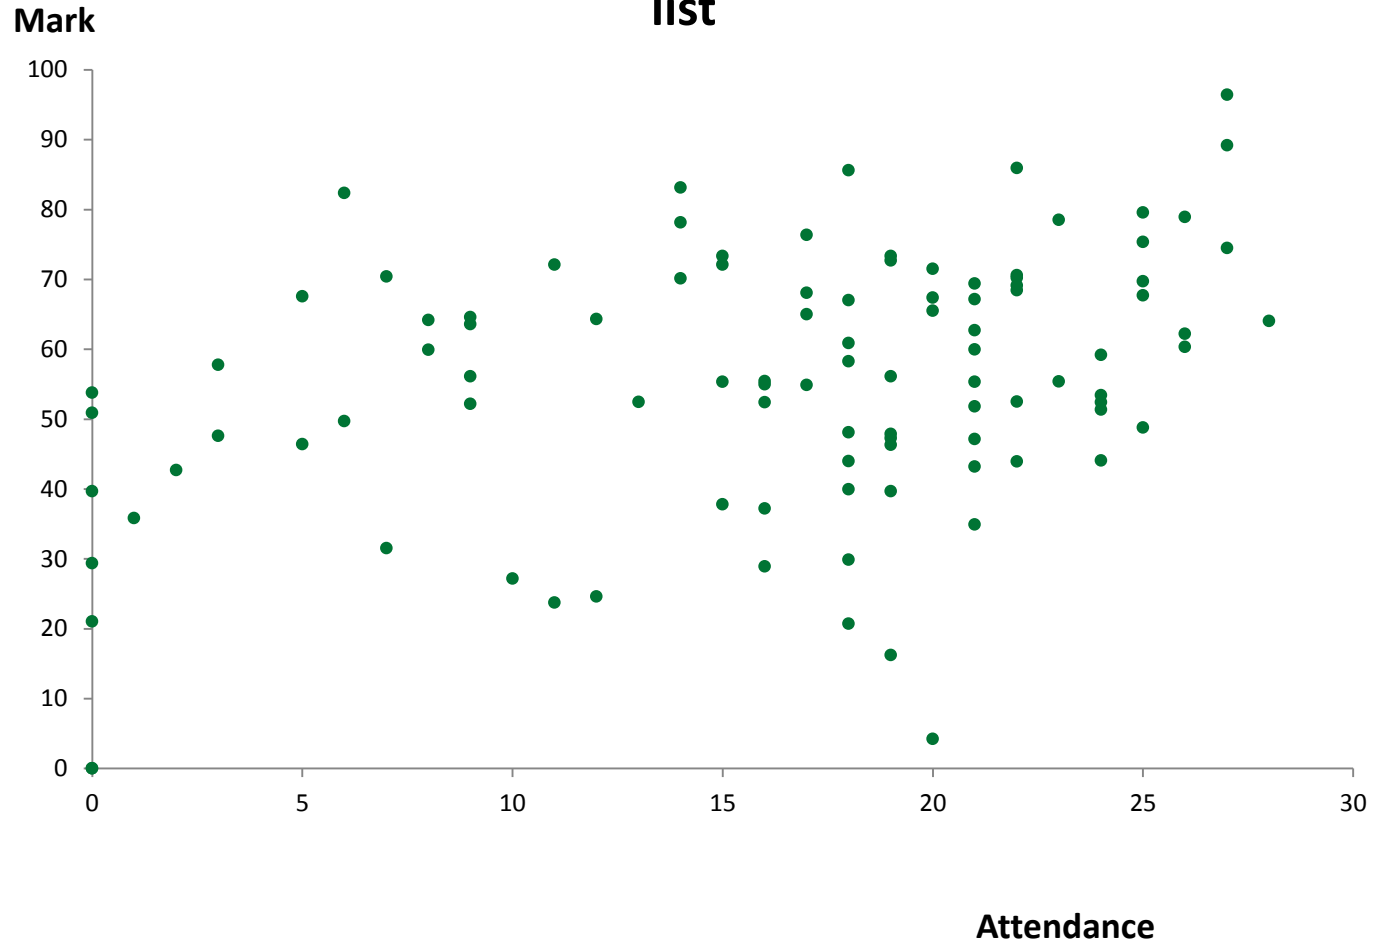

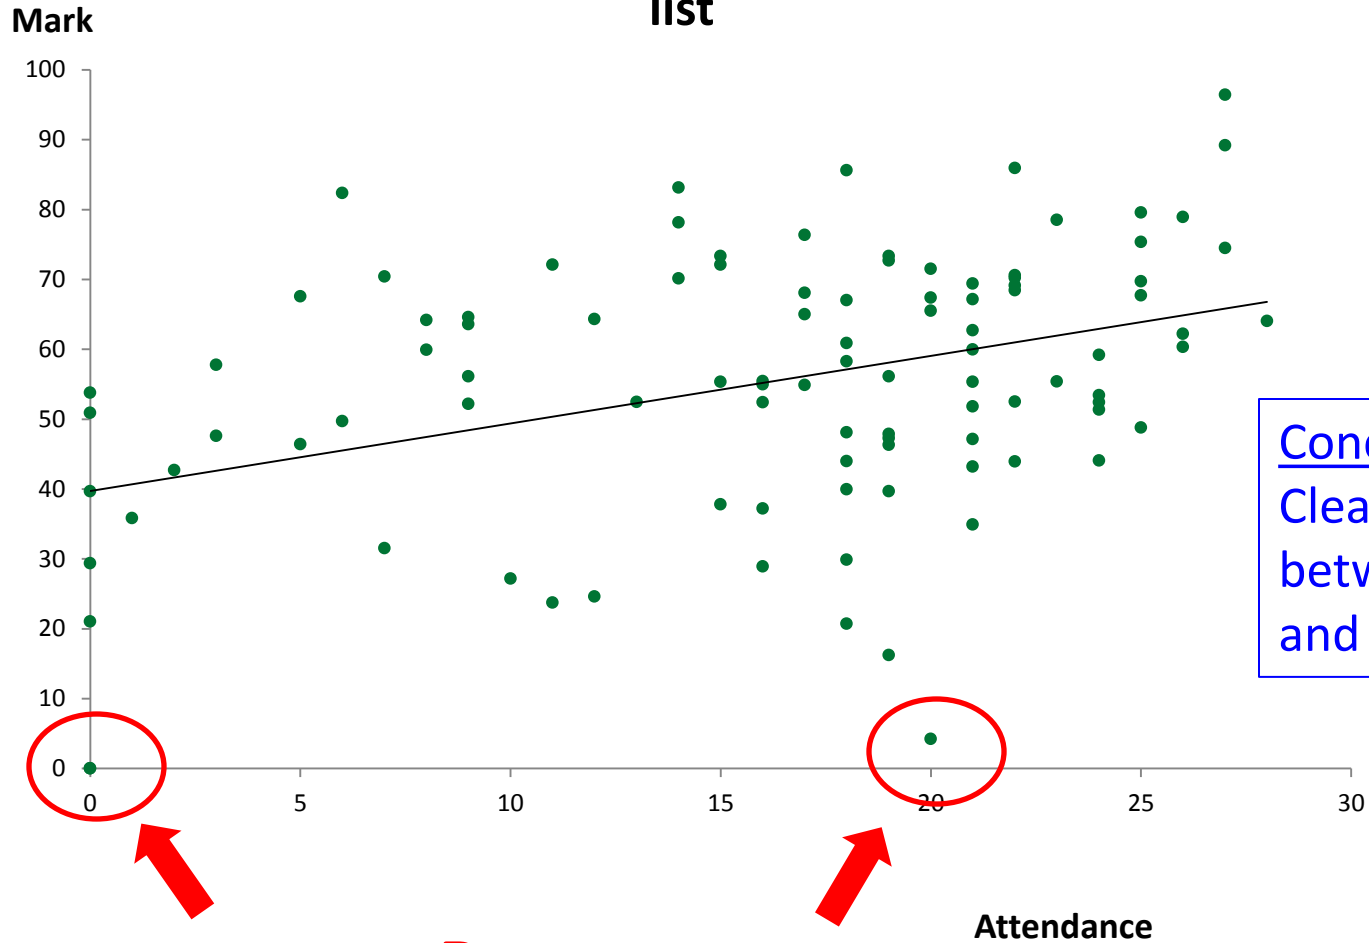

Panel variable: Module

2013 -14

Final marks first year stats module (ST4000) — the full list

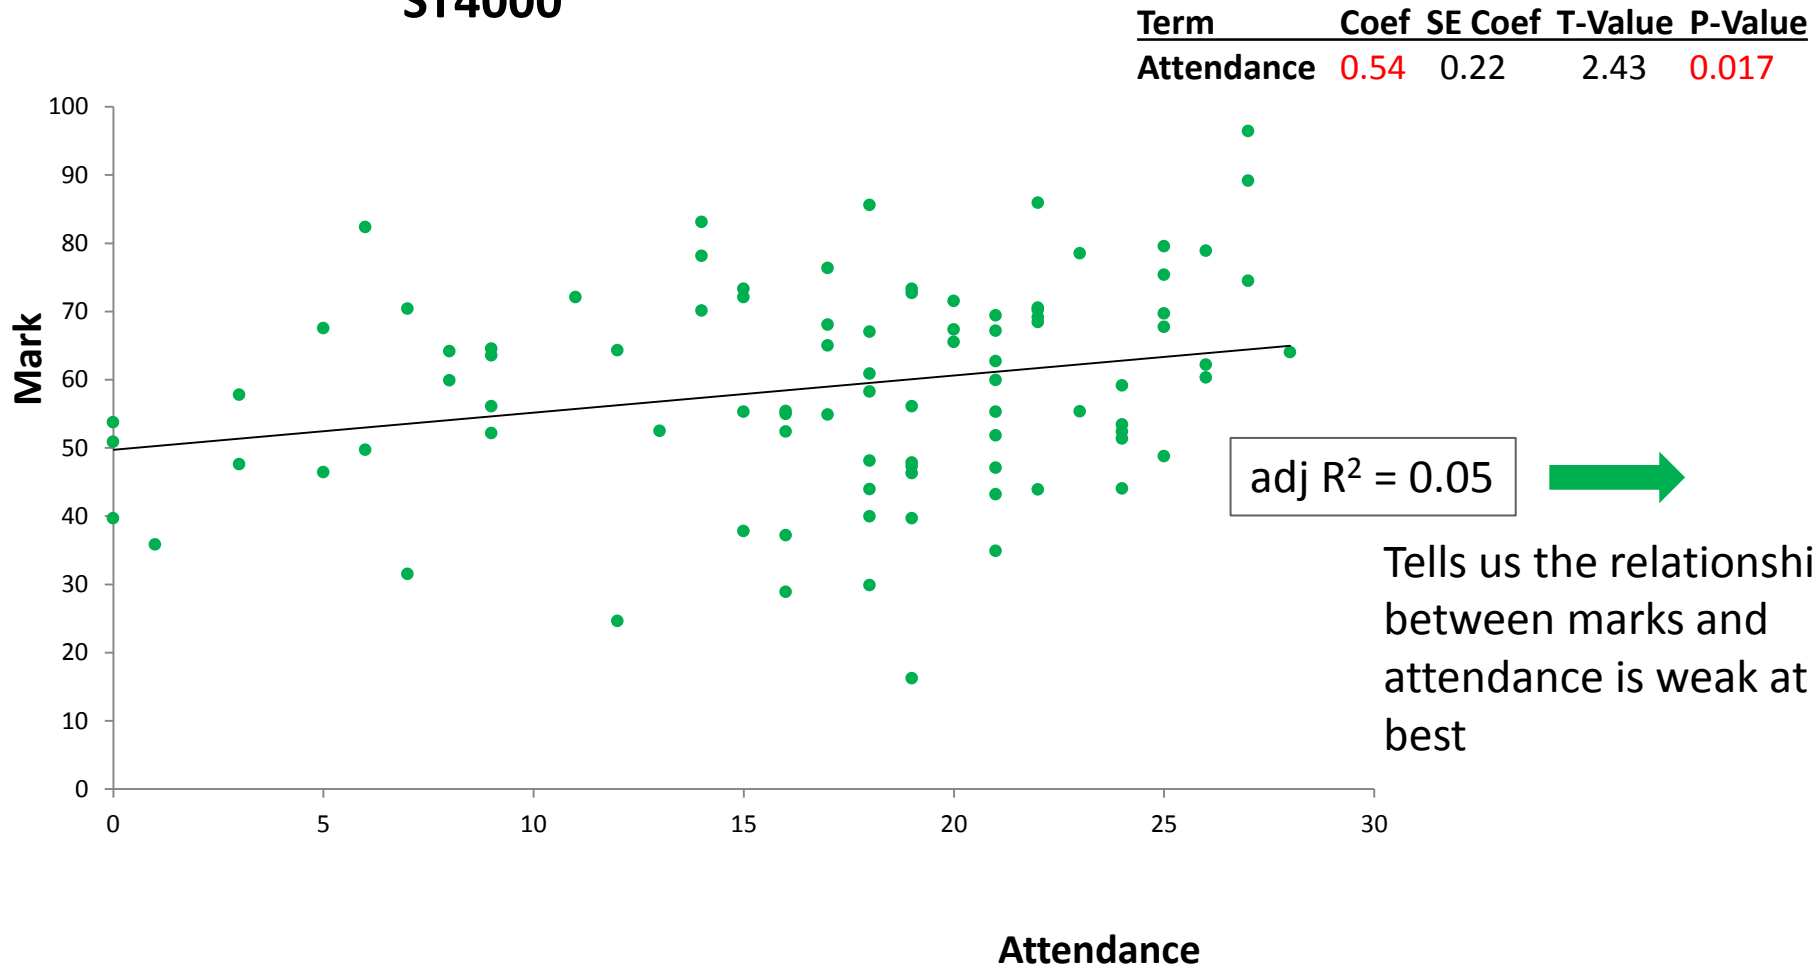

Final marks first year stats module (ST4000) — the full list

F0s and students who miss some assessments will bias the result

Students who completed all assessments

ST4000

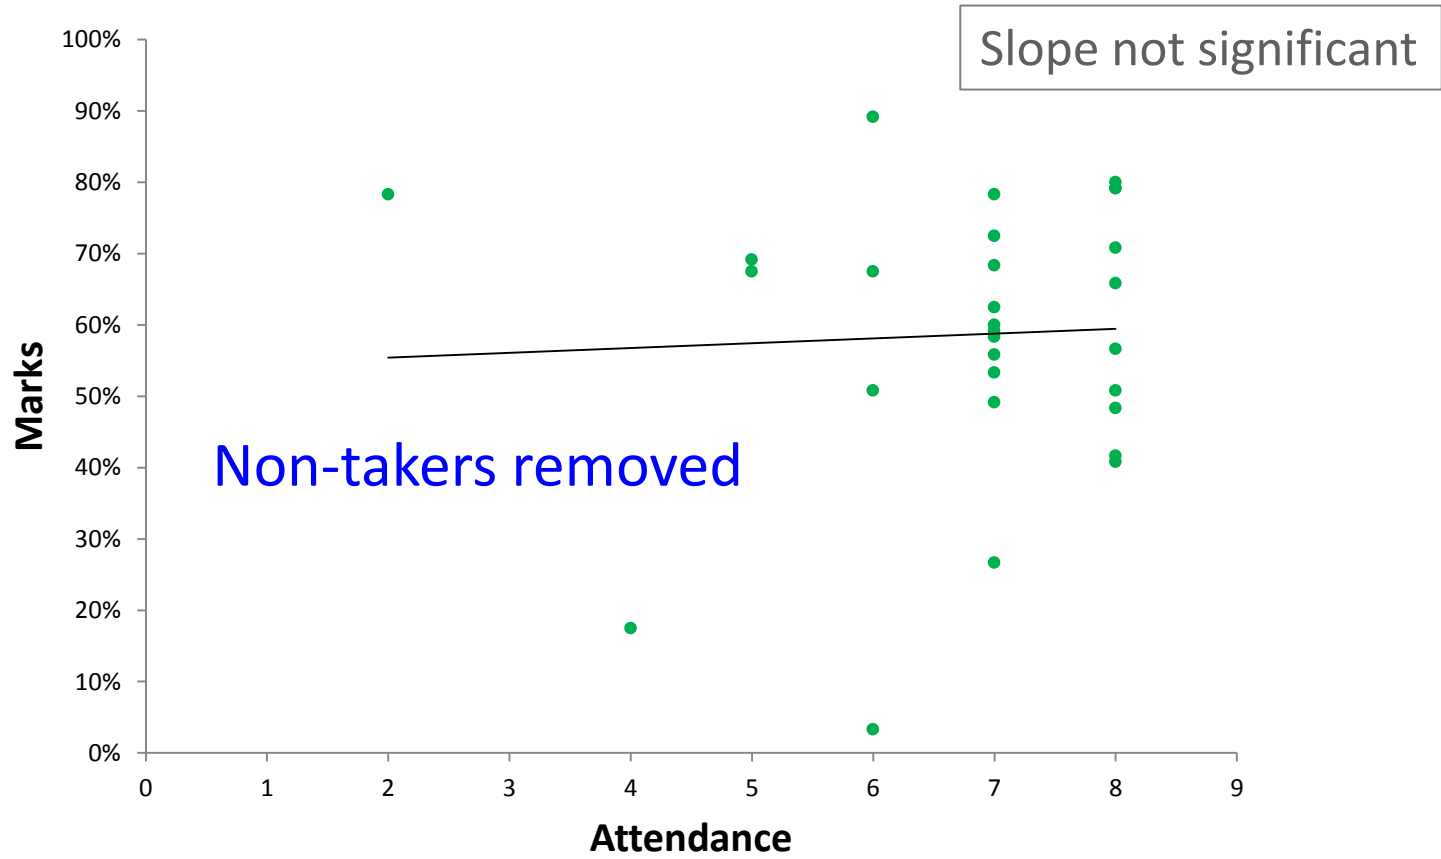

R^2 is the proportion of mark explained by attendance

AM6000 – First test

AM6000 – First test

2013 -14

AM4000 – complete results

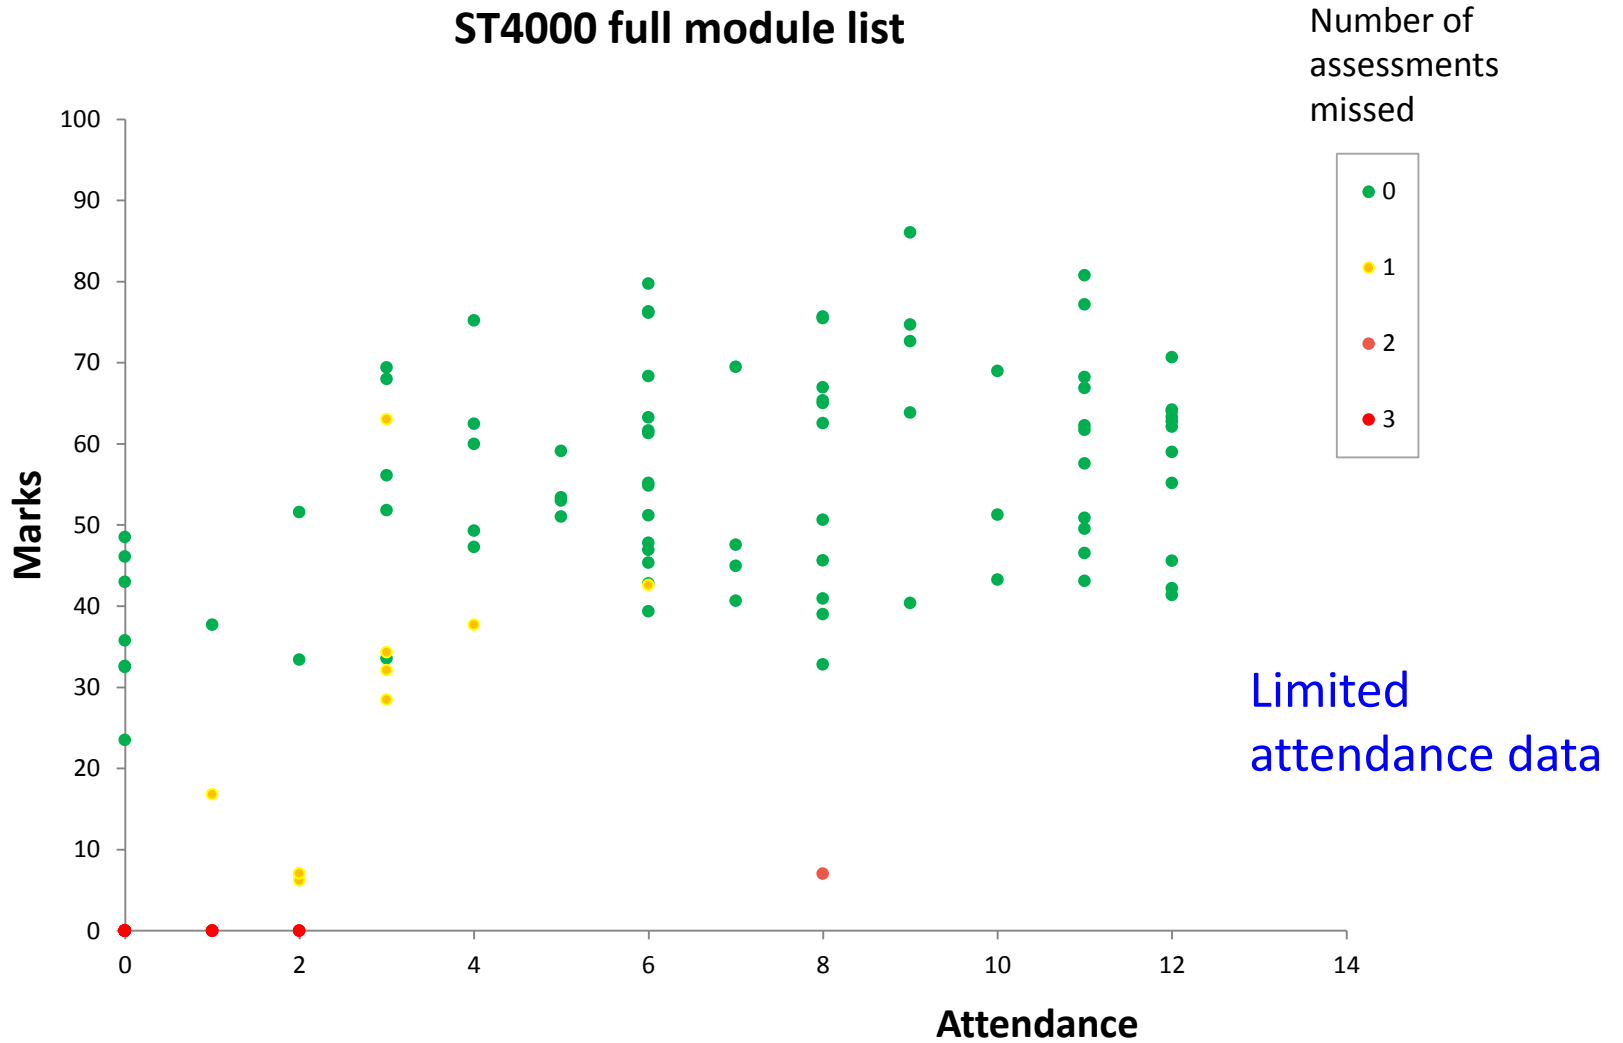

Remove FOs and partial completers

AM4000 - no assessments missed

ST4000 full module list

Remove FOs and partial completers

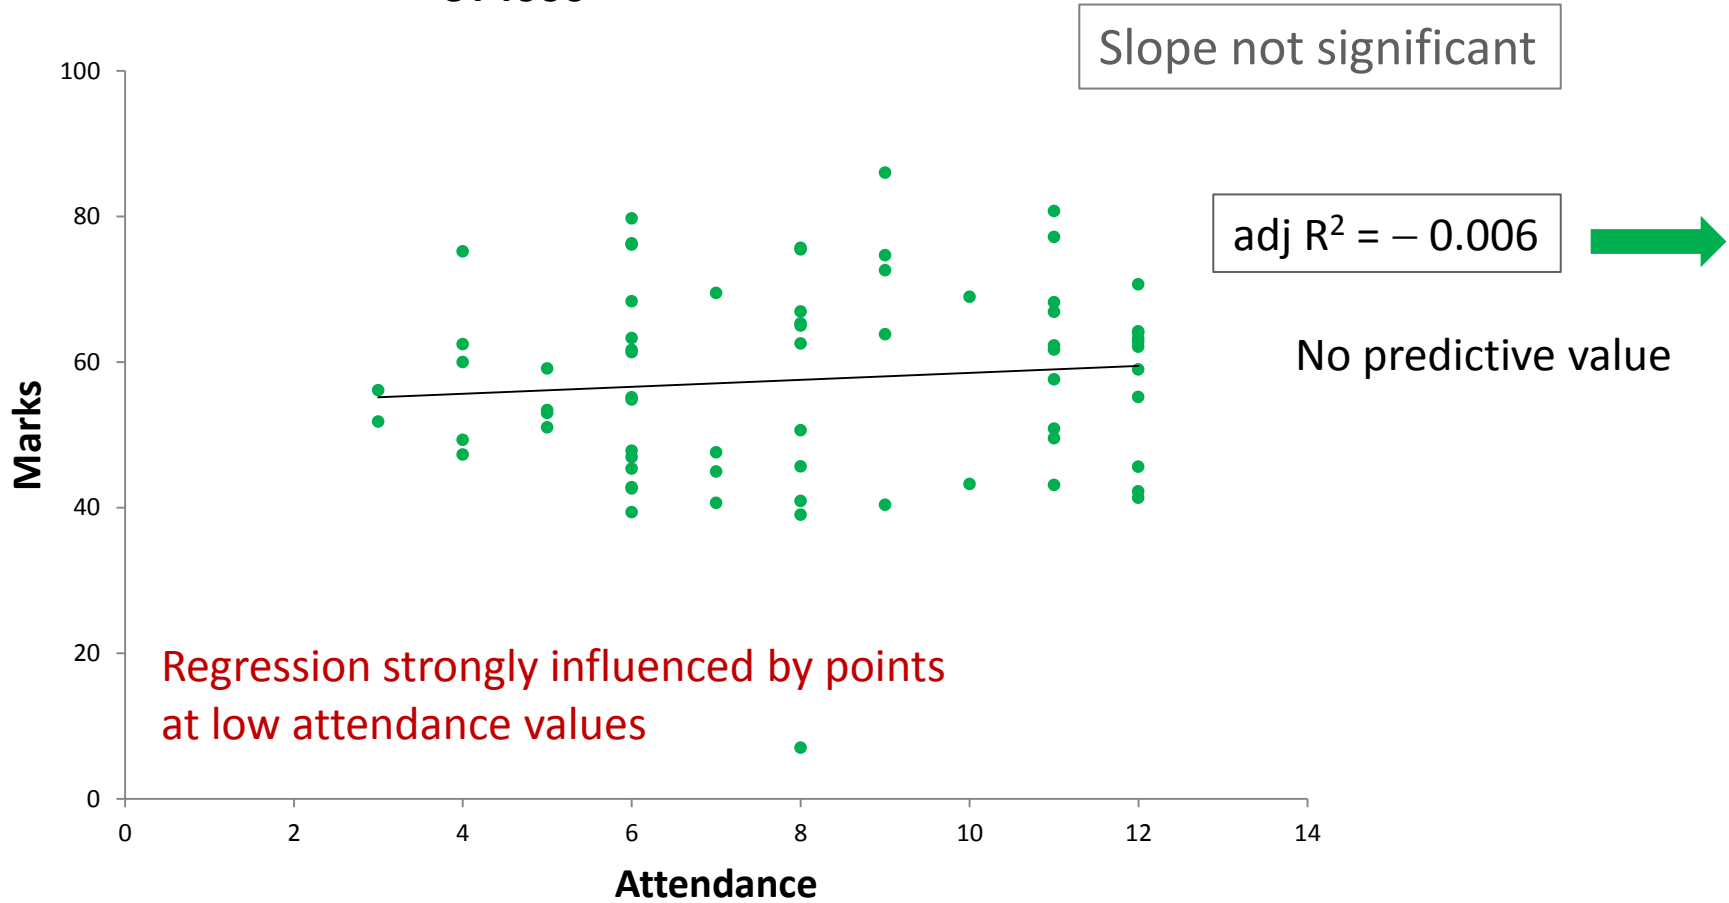

ST4000 – no assessments missed

Term	Coef	SE Coef	T-Value	P-Value
Attendance	1.250	0.453	2.76	0.007

adj R² = 0.08

2014-15

MA4000 - no assessments missed

MA4000 – no assessments missed

2014-15

MA4100

2014-15

MA4100 - no assessments missed

adj R² = 0.19

slope = 1.8***

2014-15

AM4000

2014-15

AM4000 – no assessments missed

Slope not significant

adj R² = 0.01

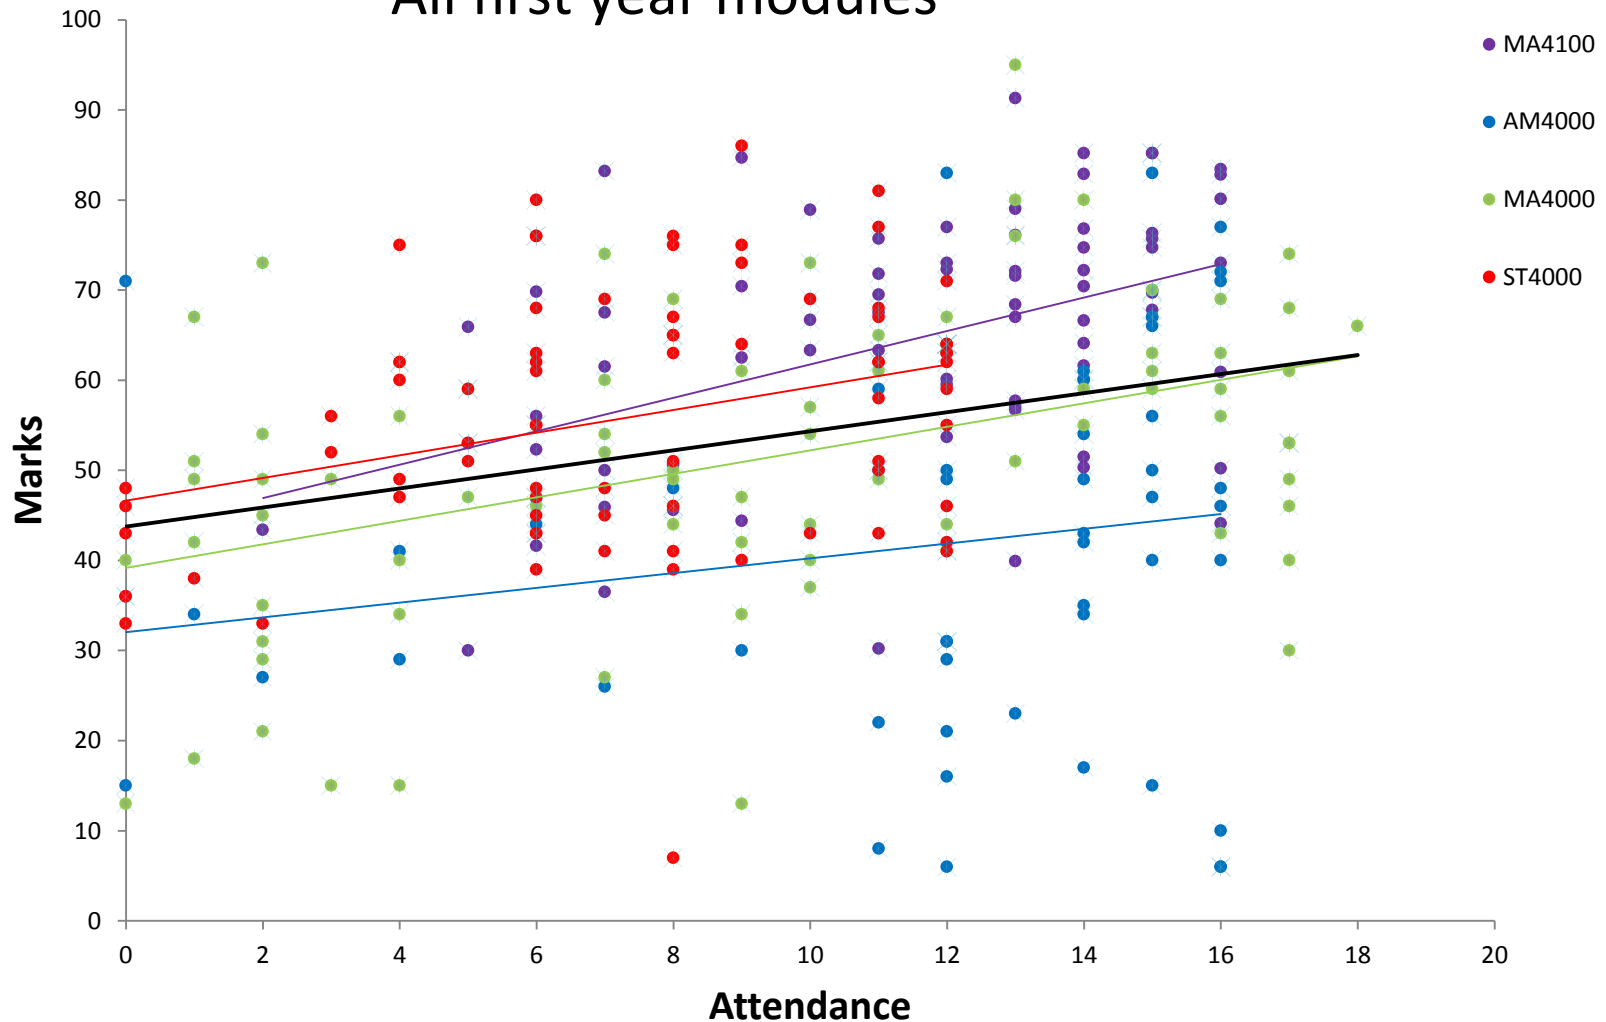

2013 -14

Psycholinguistics

2014-15

All first year modules

If you were to pool all the data, **this would confound sources of variation**

Taking into account the variability between modules, what do these data tell us about the relationship between attainment and attendance?

Testing the module slopes

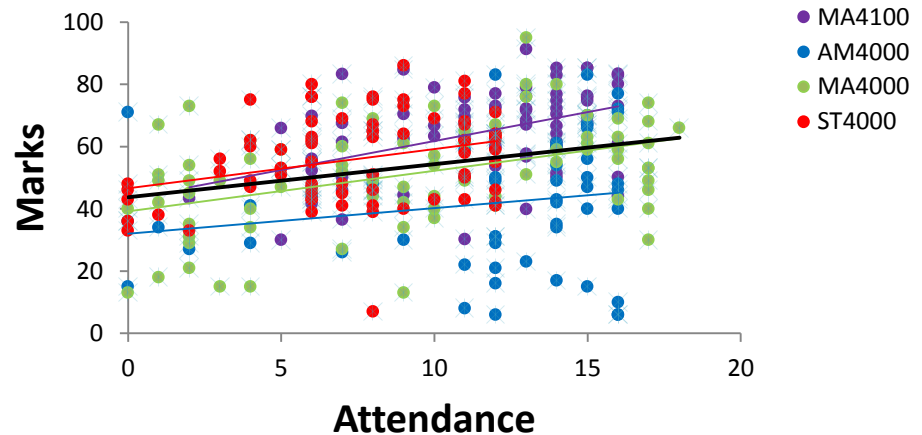

Analysis of Variance

Source	DF	Adj SS	Adj MS	F-Value	P-Value
Attendance	1	7564.6	7564.6	31.97	0.000
Module	3	1086.5	362.2	1.53	0.207
Attendance*Module	3	517.9	172.6	0.73	0.535
Error	273	64600.7	236.6		
Lack-of-Fit	51	10072.1	197.5	0.80	0.822
Pure Error	222	54528.6	245.6		
Total	280	90705.5			

Tests for difference between slopes – null

No difference between the slopes

To test whether the “slope of slopes” is significantly different to zero

$j=3$

$$\hat{Y}_{ij} = \hat{\beta}_c (X_{ij} - \bar{X}_{.j}) + \bar{Y}_{.j}$$

$j=2$

$j=1$

the common slope

NB not the same as
the pooled slope

Source	DF	Adj SS	Adj MS	F-Value	P-Value
Attendance	1	8569	8568.8	36.32	0.000
Module	3	18713	6237.7	26.44	0.000
Error	276	65119	235.9		
Lack-of-Fit	54	10590	196.1	0.80	0.836
Pure Error	222	54529	245.6		
Total	280	90706			

Source	DF	Adj SS	Adj MS	F-Value	P-Value
Attendance	1	7564.6	7564.6	31.97	0.000
Module	3	1086.5	362.2	1.53	0.207
Attendance*Module	3	517.9	172.6	0.73	0.535
Error	273	64600.7	236.6		
Lack-of-Fit	51	10072.1	197.5	0.80	0.822
Pure Error	222	54528.6	245.6		
Total	280	90705.5			

Within group partition

Source	DF	Adj SS	Adj MS	F-Value	P-Value
common slope	1	8569	8568.8	36.32	0.000
between slopes	3	517.9	172.6	0.73	0.535
pooled residuals	276	65119	235.9		
Within groups	280	74205.9			

Significant – but large number of data points

$$SSE_{\text{common}} = \sum_m SS_{yy,m} - \frac{\left(\sum_m SS_{xy,m} \right)^2}{\sum_m SS_{xx,m}}$$

$$SSE_{\text{pooled}} = \sum_m \left[SS_{yy,m} - \frac{(SS_{xy,m})^2}{SS_{xx,m}} \right]$$

Source	DF	Adj SS	Adj MS	F-Value	P-Value
common slope	1	8569	8568.8	36.32	0.000
between slopes	3	517.9	172.6	0.73	0.535
pooled residuals	276	65119	235.9		
Within groups	280	74205.9			

$$R_{adj}^2 = 1 - \frac{SS_{res} / df_{res}}{SS_{tot} / df_{tot}} = 1 - \frac{65119 / 276}{74205.9 / 280}$$

$$R_{adj}^2 = 0.11$$

Not a strong relationship

Conclusions

1. Relationship between final mark and attendance weak at best
2. Effect even weaker when interclass variability is accounted for
3. Partial completers will bias slope fitting
4. Low attenders tend to dominate relationship
5. Should any relationship be found, this should not be construed as causal
6. Poor attendance *might* be an indicator of poor engagement (though not necessarily – different students learn in different ways)

Motivation

Why Maths students miss lectures

Clickers allowed occasional questions at the start of lectures about the course and their progress

Students asked more detailed questions after a test 2014-15 — complete cohort

First week clicker questionnaire to first years.

How do you feel about doing a degree?

	Count	Percent
Brilliant – raring to go	17	23%
Good. Hopefully I'll cope	30	41%
A bit nervous but looking forward to it	23	32%
On the anxious side	1	1%
Not at all sure. Could be hard going	2	3%
Worried. Have I made a mistake?	0	0%

How motivation changes (after 6 months)

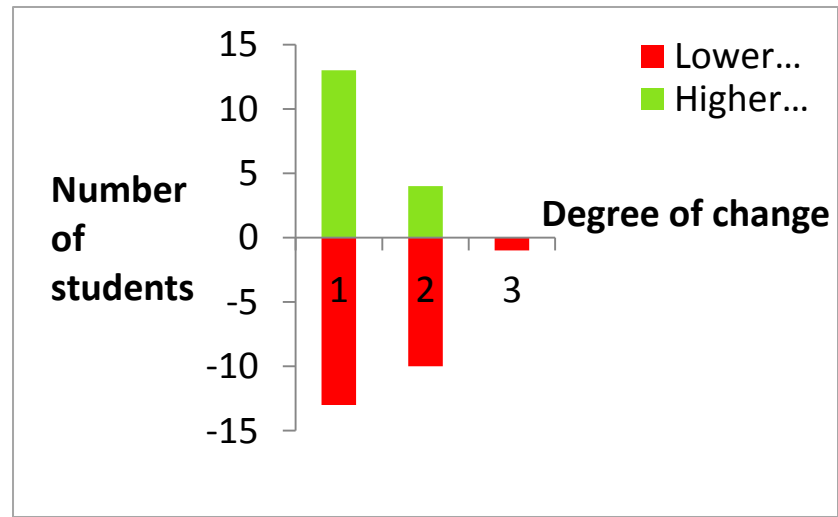

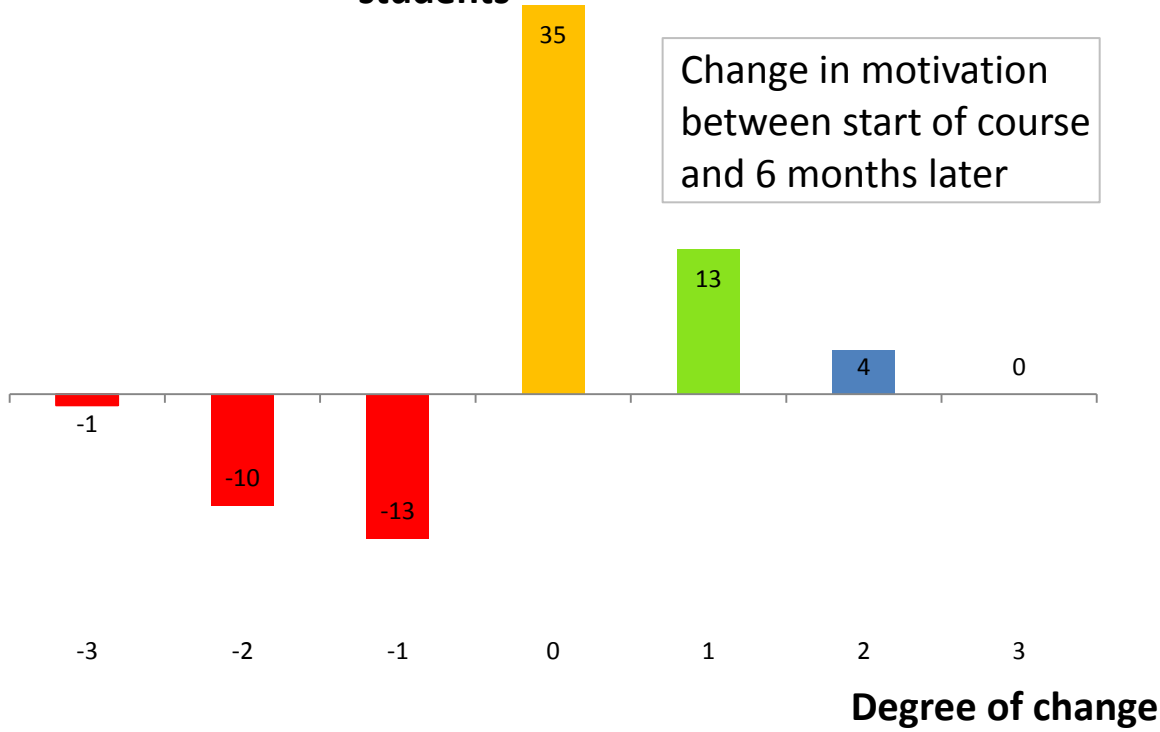

76 respondents

Number of responses

Number of students

Change in motivation between start of course and 6 months later

Reasons for missing classes

Number of responses

mainly
travel time,
delays

'My problem with Maths lectures is'

I have no substantial concerns	13	31%
They are delivered too quickly	18	43%
They are too slow	1	2%
They teach me nothing new	1	2%
They are just dull	0	0%
I can't understand them	3	7%
Lectures just don't suit me	1	2%
I don't like the lecturer	2	5%
Other	3	7%

42 respondents

Students' comments

Train delays

Content repeat from A levels

Travel distance

Travel costs

Just started own business

Stopped studying due to laziness

Homesick [*international student*]

Don't like 9am lectures

Observations from mini surveys and talking to students

Students hate scattered timetables

They often find lectures are delivered too quickly

Personal, medical, financial problems are common

They want lots of support, academic and pastoral (even though they don't turn up to meetings with tutor)
